

Priyanshu Negi

Address: **Durga Colony, Gujrowali, Nathuwawala, Dehradun, Uttarakhand, 248008**

Email-id : **priyanshu2000n@gmail.com**

Mobile No.: **7906456522**

OBJECTIVE

Aspiring software engineer with practical experience in system-level programming, compiler design, and file system architecture, alongside a growing expertise in machine learning. Passionate about building efficient, intelligent systems by combining low-level development skills with data-driven approaches. Seeking a challenging role to contribute to projects involving operating systems, compilers, or machine learning applications, while continuously expanding technical depth.

ACADEMIC DETAILS

Year	Degree/Exam	Institute	GPA/Marks(%)
Sep, 2022 - present	B.TECH in Computer Science	Graphic Era Hill University Dehradun	8.46/10.00
2022	12 th , <i>C.B.S.E</i>	Glacier public school	91.00 %
2020	10 th , <i>C.B.S.E</i>	Glacier public school	90.50 %

TECHNICAL SKILLS

- **Languages:** C++, C, Python, SQL, Assembly(8085)
- **Web Development:** HTML, CSS, PHP, MySQL
- **Software Tools:** Scikit-learn, TensorFlow, Keras, Pandas, NumPy, Matplotlib, Seaborn, Git, GitHub, Graphviz
- **Operating system:** Windows, Linux(Ubuntu)

PROJECTS

- **Digit Recognition App:**
Description: Built a deep learning-based application to recognize handwritten digits using neural networks with an accuracy of 98.8% .
Technologies Used: Python, TensorFlow /Keras, Jupyter Notebook
- **Bag Price Prediction:**
Description: Developed a machine learning model to predict the price of bags based on features like brand, material, size, and design and achieved 96.5% accuracy in price prediction.
Technologies Used: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Jupyter Notebook
- **8085 Compiler Buddy:**
Description: Developed a full-featured compiler-like tool for the Intel 8085 microprocessor that performs lexical analysis, syntax parsing, and semantic analysis of 8085 assembly language programs. The tool provides real-time error reporting, register/memory simulation, and visualizes parse trees using ANTLR.
Technologies Used: Python, ANTLR, Lex/Yacc (ANTLR4), Assembly (8085), Graphviz (for parse tree visualization), OOP Concepts
- **NTFS file simulation in OS:**
Description: Built a simulation of the NTFS (New Technology File System) inside an operating system environment. The project replicates core NTFS features such as hierarchical directories, file metadata management, Master File Table (MFT) entries, journaling, and access control, providing a functional model of how NTFS operates within an OS.
Technologies Used: C/C++, Operating System Concepts (File Systems, Memory Management), Data Structures, Linux, Shell Scripting
